

2D Zeolite Production by Exfoliating Zeolite Monoliths

H. Henning Winter research group, UMass Amherst ; NSF CMMI-1334460

Wei Fan research group, UMass Amherst; DOE DE-SC0001004

Chem Commun (2017) 53:7011-7014

The novel exfoliation method: Zeolite precursor MCM-22(P) was swollen in cetyltrimethylammoniumbromide (CTAB), mixed into sticky polybutadiene (sPB) and subjected to flow treatment and/or sonication.
